

PELHAM & WHITE

## CLEANING AND CARE GUIDE

### Faucets, Bathroom Accessories and Other Metal Finishes

Be sure to gently blot any water from the faucet's surface. Allowing water to evaporate on the surface can lead to a buildup of mineral deposits.

To remove water spots, use warm water and a soft, damp cloth.

To remove hard water stains, use a solution of 50/50 white vinegar and water.

If necessary, you may use the following general purpose cleaning products:

- Formula 409 Antibacterial
- Fantastik Antibacterial
- Windex (Original)
- Lysol Bathroom Cleaner

Other gentle all-purpose or multi-surface cleaners may also be used according to the manufacturers' instructions:

Avoid the following, which can cause damage to your finish:

- Industrial and abrasive cleaners
- Scotch-Brite sponges
- Scrubbing Bubbles Bathroom Cleaner, Lysol Tub and Tile Cleaner, and Soft Scrub
- Any products that claim they remove tarnish and rust
- Any products that contain acids or other caustic ingredients
- Bleach-based cleaners

**Do not use any toilet bowl cleaners on any metal finishes.**

---

### Acrylic Bathtubs

Acrylic tubs are very easy to clean and most dirt will simply wash off with clean water. We recommend using mild liquid dish washing soap such as Joy or Palmolive with a soft cloth or sponge. Never, under any circumstances, clean your plumbing fixtures with an abrasive cleaner or applicator, such as Scrubbing Bubbles, Comet or Scotch-Brite Pads.

Do not allow the tub surface to come into contact with products such as acetone (nail polish remover), dry cleaning solution, paint remover or any type thinner. Use of these or any other harsh chemicals will destroy the acrylic and/or finish and will void your warranty.

## Stainless Steel and Fireclay Sinks

Stainless steel sinks are durable, but they do benefit from proper care. If you want your sink to always look its best, we recommend the following:

- Clean using a non-abrasive, mild detergent such as Joy or Palmolive
  - Use only a sponge or soft cloth for cleaning
  - Avoid cleaning the sink using steel wool or green Scotch-Brite pads.
  - Avoid products containing bleach, acids or caustic ingredients for cleaning anything in the sink.
  - Remove any cast iron or steel pans promptly after cleaning
  - Keep the sink clean, dry and empty when not in use
  - Don't leave sponges, and other wet items in the sink
  - If you want to avoid water spots, wipe your sink dry after each use
  - For grey scuff marks caused by aluminum pots on fireclay sinks, we suggest the use of Flitz brand polishing compound.
- 

## Porcelain Bathroom Sinks

- Clean using a non-abrasive, mild detergent
- Use only a sponge or soft cloth for cleaning

If necessary, you may use the following general purpose cleaning products:

- Formula 409 Antibacterial
  - Fantastik Antibacterial
  - Windex (Original)
  - Lysol Bathroom Cleaner
- 

## Toilets

While selecting products and procedures to clean your toilet, we recommend the following to avoid component or finish damage:

- Clean using a non-abrasive, disinfecting cleaner for the outside of the toilet.
- NEVER use any chemicals or cleaners inside the tank. It can damage the internal components and cause leaking and flooding.
- If using a cleaning product containing bleach, DO NOT allow to come in contact stainless steel braided water supply hoses.
- Do not allow the toilet seat or cover to come into contact with products such as acetone (nail polish remover), dry cleaning solution, paint remover or any type thinner. Use of these or any other harsh chemicals will destroy the finish.
- Toilet bowl cleaner may be used, but only to clean within the bowl. Do not use outside the bowl.

**Do not use any toilet bowl cleaners on or near any metal finishes**
